

A spatially and temporally consistent smoke emissions from polar and geostationary satellite observations

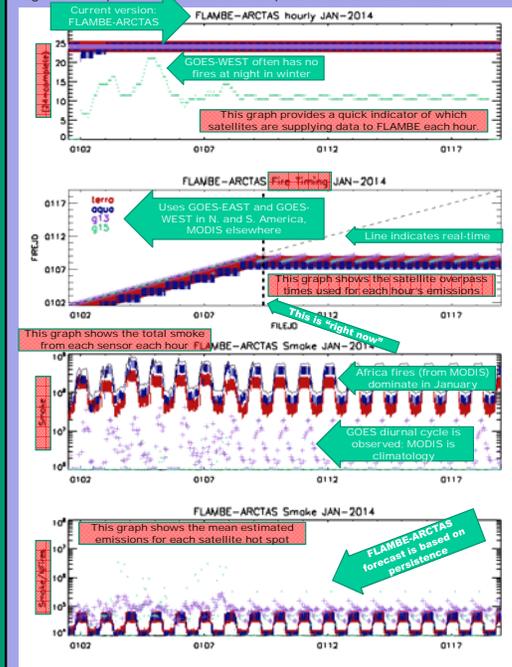

SEAC4RS Science Team Meeting
15-17 April 2014, Boulder, CO

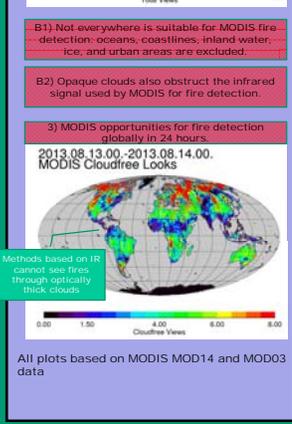

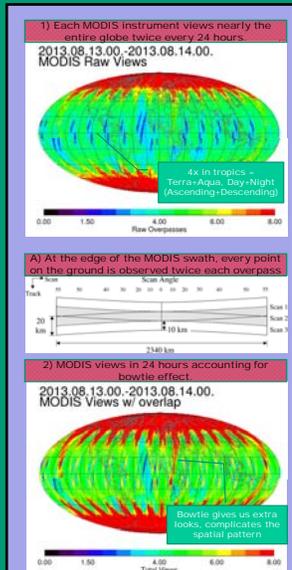

Edward J. Hyer¹, David Peterson², Jeffrey S. Reid¹
1) Naval Research Laboratory, Marine Meteorology Division, Monterey, CA, USA
2) National Research Council, Monterey, CA, USA

1. FLAMBE: Globally consistent smoke emissions for aerosol modeling

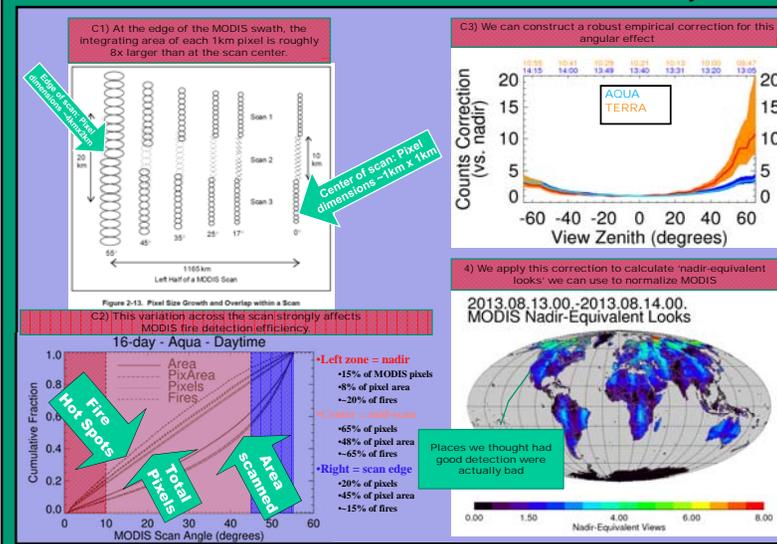

The Fire Locating and Monitoring of Burning Emissions (FLAMBE) system ingests satellite fire detections in near real time and produces global hourly estimates of smoke emissions from open biomass burning. The FLAMBE hourly emissions are publicly available from NRL. This is an example of the diagnostic output used to monitor the operational FLAMBE model.

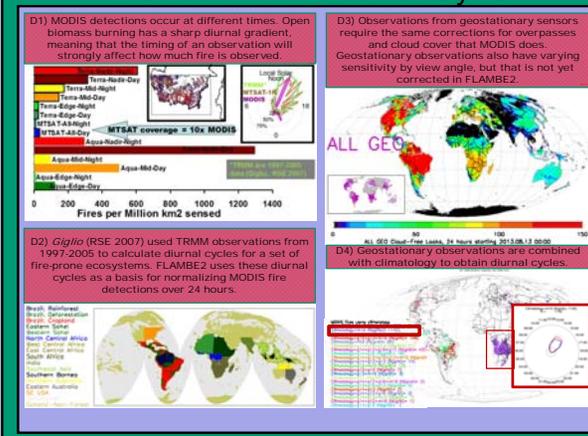

2. MODIS Coverage Correction

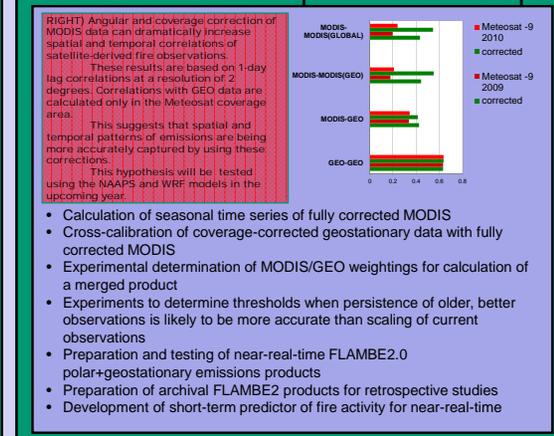

3. Correction for MODIS Detection Efficiency

4. Calculation of Diurnal Cycle

6. FLAMBE2 Development: Next Steps

7. Relevant Papers and Resources
