

P-3 Orion 04/24/17

Aircraft: [P-3 Orion - WFF \(See full schedule\)](#)

Flight Number: Science Flight #28-Geikie 01 (High Priority)

Payload Configuration: OIB Arctic

Nav Data Collected: No

Total Flight Time: 8 hours

Submitted by: Cate Easmunt on 04/24/17

Flight Segments:

From:	BGSF	To:	BGSF
Start:	04/24/17 11:00 Z	Finish:	04/24/17 19:00 Z
Flight Time:	8 hours		
Log Number:	17P006	PI:	Nathan Kurtz
Funding Source:	Bruce Tagg - NASA - SMD - ESD Airborne Science Program		
Purpose of Flight:	Science		

Flight Hour Summary:

	17P006
Flight Hours Approved in SOFRS	333.6
Total Used	332
Total Remaining	1.6

OIB - P-3 Orion 04/24/17 Science Report

Mission: OIB

Mission Summary:

Mission: Geikie 01 (priority: high)

This mission is a repeat of 2010, 2011 and 2014 IceBridge missions. It includes reflights of the Daugard-Jensen, Vestfjord and Kong Christian IV glaciers, and the "X" pattern over the Geikie Plateau, all of which have pre-IceBridge altimetry from ATM. It also reflies the Eielson, De Reste Bugt, Sortebrae and Kronborg glaciers, first flown in 2010. Finally, the northern transit line across the ice sheet is a master grid line, which had not been flown prior to 2014.

A series of storms is forecast to move up the Davis Strait into southwestern Greenland, southern Baffin Island, and Baffin Bay this week. The first of these storms was in the process of moving in when we departed Kangerlussuaq this morning. As a result, almost all of southern Greenland and the southern 2/3 of the west coast were completely covered in low cloud this morning, a situation we expect to get worse as this week progresses. The area of the east coast north of Kangerdlugssuaq Glacier was clear, however, and with light westerly winds forecast well into the afternoon was expected to stay that way today. Since we expect the weather across southern Greenland and Baffin Island to remain poor until late this week, there was a strong possibility that today might be our last flight for the next few days. So we selected this mission, knowing that we would not obtain much if any optical data west of the divide. In the event, we were 100% successful over our primary science objectives east of the divide, and 100% unsuccessful west of the divide (except for the radars) - more or less as we expected. We estimate our overall successful data return today at around 70%. We will attempt to pick up the missed portions in the west in a later mop-up mission.

All instruments performed well, but the occasional instability of the ATM T6 (wide-scanner) data system, noted yesterday, persisted. This caused very brief (<1 minute) outages on several occasions today. We intend to reassemble portions of the data acquisition system (reseating boards and connectors) after today's flight in an attempt to prevent recurrences.

Data volumes:

Accumulation Radar: 1.4 Tb

ATM: 105 Gb

CAMBOT: 40 Gb

DMS: 98 Gb

FLIR: 16.0 Gb

KT19: 11 Mb

MCoRDS: 1.9 Tb

Narrow Swath ATM: 36 Gb

Snow Radar: 809 Gb

total data collection time: 7.7 hrs
