

## P-3 Orion - WFF 05/12/19

**Aircraft:**

P-3 Orion - WFF ([See full schedule](#))

**Flight Number:**

2019 OIB Science Flight #20

**Payload Configuration:**

Operation IceBridge

**Nav Data Collected:**

No

**Total Flight Time:**

9 hours

**Submitted by:**

Mike Cropper on 05/13/19

**Flight Segments:**

<b>From:</b>	BGSF	<b>To:</b>	BGSF
<b>Start:</b>	05/12/19 11:45 Z	<b>Finish:</b>	05/12/19 20:45 Z
<b>Flight Time:</b>	9 hours		
<b>Log Number:</b>	<a href="#">19P017</a>	<b>PI:</b>	Joseph MacGregor
<b>Funding Source:</b>	Bruce Tagg - NASA - SMD - ESD Airborne Science Program		
<b>Purpose of Flight:</b>	Science		

**Flight Hour Summary:**

	<b>19P017</b>
<b>Flight Hours Approved in SOFRS</b>	250
<b>Total Used</b>	216.3
<b>Total Remaining</b>	33.7

**19P017 Flight Reports**

**Mission:**

OIB

**Mission Summary:**

Mission: K ? EGIG ? Summit  
Priority: Baseline

OIB completed the final baseline mission out of Kangerlussuaq: K ? EGIG ? Summit. The mission accomplishes several important tasks including extending coverage into the uppermost part of the Jakobshavn catchment with ICESat and ICESat-2 tracks and hitting the key validation Summit validation traverse site along ICESat track 412 and ICESat-2 track 879. Finally, we hit two major field surveys: the K-Transect within the Russell Glacier catchment and the EGIG line. For this campaign, the eastern portion of the EGIG line was shortened to

accommodate for more ICESat-2 tracks near Summit and a single ICESat track was replaced with an ICESat-2 track in the upper Jakobshavn catchment. A total of six ICESat-2 tracks were flown, two of which were swapped (see notes below) to minimize the timing between OIB and IS-2 data collection (the attached map has been updated accordingly).

Due to a local event at the airport, we incurred a delayed takeoff with an expected arrival time after 6 PM. As a result, we were able to survey a portion of the Southwest Glaciers 01 mission over the Sukkertoppen Ice Cap just west of Kangerlussuaq in addition to the entire K-EGIG-Summit mission.

The flight was very smooth, although quite featureless, over the interior ICESat / ICESat-2 tracks. As expected, we encountered clear skies for nearly the entire route, including Summit, which had been fogged in for several days prior. Temperatures dropped a few degrees over the past few days, so many of the melt ponds developed a thin layer of ice on top. We noted evidence of surface meltwater pooling up to ~26 km inland of Russell Glacier and ~4100 feet in elevation.

Headwall SWIR did not operate today, but otherwise all instruments worked well. ATM estimates 100% altimetry data recovery. We performed a ramp pass at 2500? prior to landing.

#### ICESat-2 Tracks (+/- indicates OIB surveyed after/before ICESat-2)

0681, - 8 hours (substitute)  
0879, - 13 days  
0437, + 16 days  
0749, - 5 days  
0246, + 28 days  
0727, - 3 days (substitute)
