

July 25, 2022

To Whom It May Concern:

On behalf of the Earth Science Project Office (ESPO) and the National Aeronautics and Space Administration, I would like to introduce to you the Convective Processes Experiment – Cabo Verde (CPEX-CV) field campaign (www.espo.nasa.gov/cpex-cv). The purpose of this letter is to identify people who will be participating in the CPEX-CV campaign based on Sal Island, Republic of Cabo Verde.

During CPEX-CV we will fly the NASA DC-8, a medium-altitude aircraft equipped with a suite of remote sensors and dropsonde-launch capability to measure tropospheric aerosols, winds, temperature, water vapor, and precipitation. These measurements will sample atmospheric dynamics, marine boundary layer properties, convection, the dust-laden Saharan Air Layer, and their interactions across various spatial scales. This sampling will improve our understanding of dynamics and microphysical in the data-sparse tropical East Atlantic region. One of the expected outcomes of this project will be an improved ability to predict weather in the region.

CPEX-CV will operate out of the Amilcar Cabral International airport in Sal Island, Republic of Cabo Verde, between 1 and 30 September 2022. Scientists from different institutions and universities in the USA and abroad will be traveling to Sal Island to participate in the NASA DC-8 research flights.

Below is a comprehensive list of project participants traveling to Sal Island through the project field phase.

Don't hesitate to reach out for questions and general inquiries about CPEX-CV and other projects managed by the Earth Science Project Office.

Respectfully,

A handwritten signature in black ink, appearing to read "Vidal Salazar".
